

# **Current Tools**

**FOR THE PROFESSIONAL ELECTRICIAN**

## **MODEL 754 OFFSET BENDER**

**for**

**1/2", 3/4" & 1" EMT**

**1/2" & 3/4" Rigid, IMC and PVC Coated Rigid**

### OPTIONAL SHOE GROUPS AVAILABLE

- Part #754-1/2 To bend 4 pieces of 1/2" EMT conduit.
- Part #754-3/4 To bend 2 pieces of 3/4" EMT or 1/2" Rigid conduit.

## **Operating, Maintenance, Safety and Parts Manual**

11/2019

**Read and understand this material before operating or servicing this Offset Bender. Failure to understand how to safely operate and service this unit could result in serious injury.**

This manual is free of charge. All personnel who operate or service this Offset Bender should have a copy of this manual and read and understand its contents. To request a copy, call, write to the address below or visit our website at [www.currenttools.com](http://www.currenttools.com). All information, specifications and product designs may change due to design improvements or updates and are subject to change without notice. Current Tools does not assume any liability for damages resulting from misuse or incorrect application of its products.

## SAFETY ALERTS

### Safety Alert Symbol

THIS SAFETY SYMBOL is used to call your attention to instructions that concern your personal safety. It means: ATTENTION! BE AWARE! THIS IS AN IMPORTANT SAFETY INSTRUCTION! Read, understand, and follow these safety instructions. Failure to follow these safety instructions may result in injury or death.

#### DANGER

Immediate hazards which, if not avoided, WILL result in serious personal injury or death.

#### WARNING

Hazards or unsafe practices which, if not avoided, COULD result in serious personal injury or death.

#### CAUTION

Hazards or unsafe practices which, if not avoided, COULD result in minor personal injury or property damage.

## IMPORTANT SAFETY INFORMATION

-  **CAUTION** NEVER alter this equipment. Doing so will void the warranty.
-  **CAUTION** NEVER remove guards. They are installed for your protection.
-  **CAUTION** ALWAYS keep conduit under control when unloading. Conduit not under control could injure the operator or others in the area.
-  **CAUTION** ALWAYS inspect the bender before operating. Replace any damaged, missing or worn parts.
-  **CAUTION** WEAR approved safety glasses when using the bender.
-  **CAUTION** Bender MUST be used on a firm, flat surface. DO NOT use on an inclined surface.
-  **CAUTION** ALWAYS keep the path of the bending conduit clear of obstructions.
-  **CAUTION** ONLY use the bender for its intended purpose. Only use the bender to bend the specified types and sizes of conduit or pipe.
-  **CAUTION** DO NOT allow the rolling shoe carriage to make contact with the elevating shoe carriage.
-  **CAUTION** ONLY roll on a firm, flat surface.
-  **CAUTION** NEVER use an impact driver to operate the offset bender. Using an impact driver could damage the gearbox and other components.

## SPECIFICATIONS

<b>Model No.</b>	<b>754</b>
<b>Capacity – Standard shoes</b>	<b>1/2", 3/4", 1" EMT conduit and 1/2" &amp; 3/4" Rigid, IMC and PVC Coated conduit</b>
<b>Capacity – Optional shoes</b>	
— Part #754-1/2	1/2" EMT conduit (4 pieces)
— Part #754-3/4	3/4" EMT conduit (2 pieces) 1/2" Rigid conduit or PVC coated conduit (2 pieces)
<b>Dimensions</b>	<b>Length – 62" Width — 20" Height — 45"</b>
<b>Weight</b>	<b>135 lbs.</b>
<b>Max. Offset Height</b>	<b>22"</b>

## FEATURES

## ASSEMBLY INSTRUCTIONS

1. Unfold the front leg and secure with the bolt, washer and locknut provided.
2. Unfold the rear leg and secure with the bolt, washer and locknut provided.
3. Insert the gauge rod as shown and secure with the thumb screw.

# OPERATING INSTRUCTIONS

## OFFSET BENDS

1. Determine the height and angle for the desired offset
2. Refer to the rolling shoe starting position chart and use the multiplier calculation to determine the starting arrow position of the rolling shoe. As an example, for a 45° bend, the multiplier is 1.41. To make a 10" high offset bend, multiply 10" × 1.41 = 14.1". Place the arrow on the rolling shoe at the 14.1" mark on the horizontal scale.

### ROLLING SHOE STARTING POSITION

Bend Degree	Multiplier Calculation
45°	1.41 × offset height
30°	2 × offset height
15°	3.86 × offset height

3. Using a battery powered drill (recommended drill – 1/2" variable speed cordless drill with a minimum 18 Volts), connect to the hex drive shaft with the 3/8" nut driver bit provided. Align the zero line on the vertical scale with the vertical scale indicator (see drawing).

4. With the conduit support block lowered, the rolling carriage block closed and secured and the conduit hold down open, slide the conduit over the conduit support block and through the correct groove on the rolling and elevating shoes. (See chart below for the correct groove size). Continue to slide the conduit past the elevating shoe until the desired amount of conduit extends past the shoe. The length of conduit that extends past the edge of the elevating shoe will be the straight portion of the conduit that extends past the offset.

NOTE: All shoes are marked with a line indicating the center of the bend.

Conduit Size	Conduit Type	Standard 3 Groove Shoe Correct Size Groove
1/2"	EMT	Small
3/4"	EMT	Middle
1"	EMT	Large
1/2"	Rigid, IMC	Middle
3/4"	Rigid, IMC	Large
1/2" & 3/4"	PVC Coated Rigid	Large

5. Raise the conduit support block. Then close the conduit hold down and tighten the screw(s) against the conduit. Be sure the conduit is completely seated in the elevating shoe groove(s).

## OPERATING INSTRUCTIONS

NOTE: Check the arrow on the rolling shoe carriage to be sure it has not moved during the bending set up process.

- Using the Springback Chart for Vertical Scale (see chart below), determine the height to raise the elevating shoe. As an example, for a 45° bend, add an additional 5% to the desired offset height. To make a 10", 45° offset, you would add an additional 5%, which is ½", for a total of 10 ½".

**SPRINGBACK CHART FOR VERTICAL SCALE**

Bend Degree	Multiplier Calculation
45°	5%
30°	10%
15°	20%

- Using the drill, raise the elevating shoe to the height calculated in step 6. The rolling shoe will move as the elevating shoe rises and create the second bend.
- To remove the bent conduit, slightly lower the elevating shoe to release the tension on the conduit. Then, pull the quick release pin and raise the rolling carriage block to the open position. Next, pull the pawl release and raise the conduit hold down. Remove the conduit.

NOTE: Be sure to lower the conduit support block and close and secure the rolling carriage block before setting up the next bend.

NOTE: If the end of the conduit that extends past the conduit hold down is too high, the conduit hold down screw should be lowered. If it is too low, the conduit hold down screw should be raised.

## OPERATING INSTRUCTIONS

### Saddle Bend

1. Complete an offset bend as previous instructed. Pull the pawl release and raise the conduit hold down. Next, lower the elevating shoe to the zero ( $\emptyset$ ) position. Rotate the conduit 180° degrees to ensure your two offsets will be in perfect alignment.
2. Slide the desired length of conduit through the elevating shoe to create the straight length between the offsets.
3. Return the rolling shoe carriage to the starting position of the offset, lower the conduit hold down and tighten the screw against the conduit. Then, raise the elevating shoe to the calculated offset height including the springback.
4. To remove the bent conduit, slightly lower the elevating shoe to release the tension on the conduit. Then, pull the quick release pin and raise the rolling carriage block to the open position. Next, pull the pawl release and raise the conduit hold down. Remove the conduit.

### Matching Existing Offsets

1. You can match existing offsets without knowing the degree of the bend. First, measure the center distance on the bends of the existing offset. Set the arrow on the rolling shoe carriage at that number on the horizontal scale.
2. To determine the vertical scale calculation, measure the height of the existing offset. Next, check the springback chart and add the springback amount to this height.

### Multiple Offset Bends

To easily repeat offsets, the Model 754 is equipped with a gauge rod.

1. To set the gauge rod, raise the elevating shoe to the calculated height for the first bend.
2. Next, loosen the thumb screw and raise the gauge rod until the gauge rod indicator just touches the top of the elevating shoe carriage (see drawing). Retighten thumb screw.
3. Gauge rod is now set for repeat bends.

## OPERATING INSTRUCTIONS

### SHOE ALIGNMENT

The shoes on every Model 754 are set and tested for alignment prior to shipping. However, if they ever become misaligned, use the following procedure to realign.

Front Bend — If the front bend has a "dog," the elevating shoe will need to be aligned.

Rear Bend — If the rear bend has a "dog," the rolling shoe will need to be aligned.

Loosen the bolts that hold the shoe in question and use a straight piece of conduit to realign the shoe. Re-tighten the bolts.

## OPTIONAL SHOE GROUPS

Optional shoe sets to bend multiple pieces of the same size conduit are available.

- Part #754-1/2 is the complete set of shoes and accessories to bend 4 pieces of 1/2" EMT at the same time.
- Part #754-3/4 is the complete set of shoes and accessories to bend 2 pieces of 3/4" EMT or 1/2" Rigid at the same time.

## MAINTENANCE

To ensure smooth operation, apply a liberal amount of multipurpose grease to the gear rack monthly.

# EXPLODED VIEW – BENDING SHOES

## OPTIONAL SHOE GROUPS

754-1/2 MULTIPLE BEND SHOE GROUP  
TO BEND 4 PIECES OF 1/2" EMT  
CONDUIT. INCLUDES ITEM  
NUMBERS 25A, 28A AND 29A

754-3/4 MULTIPLE BEND SHOE GROUP  
TO BEND 2 PIECES OF 3/4" EMT  
CONDUIT. WILL ALSO BEND 2  
PIECES OF 1/2" RIGID CONDUIT  
OR 1/2" PVC COATED RIGID  
CONDUIT

**PARTS LIST**

<b>ITEM#</b>	<b>PART#</b>	<b>QTY</b>	<b>DESCRIPTION</b>
2	2-1111	2	PIN-ROLL 3/16" x 1.25"
